

DAAT Recipe Test Report.

Problems	Solutions
Errors in database in creating cuisine category.	Refactored code in App.py
Image card not displaying.	Checked the Database description naming and corrected.
Dropdown menu for course meal in Add recipe page not showing. Issues with tuple in Python	Wrote the code in python tuple list in App.py folder to read the list in the database.
Had issues with size of brand Logo	Used Cloudinary to set logo size.
Most of errors occurred in the App.py and caused page not loading.	Debug errors in Google DevTools and lighthouse to highlight errors.
<p>Conclusion:</p> <p>Having found as many defects as possible, it does not necessarily satisfy the app will be satisfactory to end users. Certain parts are more prone to error than others this based on the principle of testing which states you cannot test every possible combination of scenarios.</p> <p>In conclusion, I have carried out regression testing on part of the code not changed to verify changes do not affect functionality of unchanged code.</p> <p>The test have been completed to meet the basic functionality.</p>
